Experience

SBB Research Group – Software Engineer

May 2023 – Present

- Built a comprehensive investor portfolio management platform from concept to production, enabling investors to track performance and fund administrators to manage client relationships
- Designed and launched a centralized company portal that streamlined access to internal products, reducing navigation time by 50% and improving productivity across teams
- Developed an automated reporting tool integrated with Asana that improved daily communication between managers and employees, increasing task visibility and collaboration
- Engineered REST API integrations with Bloomberg GO to enable seamless financial data retrieval, improving data-driven decision-making for investment teams
- Led the company's financial data warehousing initiative, establishing scalable ETL pipelines to centralize access to large datasets across multiple teams
- Implemented secure authentication system using Python/FastAPI and JWT to manage user permissions and enhance data security
- Collaborated closely with fund managers and business stakeholders to gather requirements, iterate on features, and deliver user-centered solutions
- Leveraged AI tools (e.g., Claude) throughout the development lifecycle to accelerate prototyping, code review, and debugging, improving engineering velocity
- Developed an internal MCP (Model Context Protocol) server allowing AI providers like Claude to connect to internal infrastructure, enabling AI-driven workflows and process automation across teams
- Built internal data dashboards using Node.js and PostgreSQL, enabling teams to visualize and interact with key datasets in real time

RedMane Technology LLC. — Software Engineer

July 2022 – May 2023

- Designed and implemented authentication features in React including Sign Up/Sign In functionality, collaborating with designers on frontend UI to create secure, intuitive user experiences
- Maintained and optimized Java backend services, improving application scalability and performance for client-facing solutions
- Built full-stack features connecting React frontend to Java backend services and databases, ensuring seamless data flow and system reliability
- Participated in code reviews and worked in an agile environment, iterating rapidly based on client feedback and testing results

HBR Consulting – Web Developer Intern

August 2021 – July 2022

- Collaborated with stakeholders to gather requirements and deliver backend and frontend features, directly supporting user needs and improving reliability of client-facing systems.
- Full stack development involved, updating, debugging, and testing current web projects for the company, as well as the back-end Firebase Firestore and implementing security to ensure reliability.
- Participate in meetings to explain code progress, status, and technical ideas in an understandable and digestible format for others

Education

Loyola University Chicago, Chicago, IL

Bachelor of Science in Computer Science & Mathematics Minor **GPA:** 3.98/4.0

Awards: *Summa Cum Laude, Dijkstra Award for Outstanding Academic Achievement, Presidential Scholarship, Dean's List*

Skills

Languages: Java, Javascript/Typescript, HTML5/CSS, Python, SQL and NoSQL,

Technologies: Git, VSCode, BlueJ, Figma, Firebase, MySQL, NPM, Jenkins, Jira, Asana

Libraries/Frameworks: React.js, Node.js, VueJs, pandas, NumPy, Redux, tailwind, bootstrap, materialUI, FastAPI, gunicorn
